DETAILED ACTION

Allowable Subject Matter

Claims 1, 3, 8, 15, 17 and 22 - 54 are allowed.

The following is an examiner's statement of reasons for allowance:

Re independent claims 1, 8 and 15 the prior art of record does not disclose a receiver comprising of a first delay unit, coupled to the real signal path, for receiving the digital real signal component and outputting the digital real signal component after a first predetermined delay period expires; a first adder, coupled to the real signal path and the first delay unit, for adding a negative value of the digital real signal component to the delayed digital real signal component output by the first delay unit to generate a first resulting signal; a first multiplier, coupled to the first adder, for multiplying the first resulting signal with a first compensation signal having a first predetermined value (.KI) to generate a second resulting signal; a second delay unit, coupled to the imaginary signal path, for receiving the digital imaginary signal component and outputting the digital imaginary signal component after a second predetermined delay period expires; and a second adder, coupled to the second delay unit and the first multiplier, for outputting the digital imaginary cross-talk compensated signal component.

Re independent claims 37, 43 and 49, the prior art of record does not disclose a receiver comprising a first delay unit, coupled to the imaginary signal path, for receiving the digital imaginary signal component and outputting the digital imaginary signal component after a first predetermined delay period expires; a first adder, coupled to the imaginary signal path and the first delay unit, for adding a negative value of the digital imaginary signal component to the delayed digital imaginary signal component output by the first delay unit to generate a first resulting signal; a first multiplier, coupled to the first adder, for multiplying the first resulting signal with a first compensation signal having a first predetermined value (K_2) to generate a second resulting signal; a second delay unit, coupled to the real signal path, for receiving the digital real signal component and outputting the digital real signal component after a second predetermined delay period expires; and a second adder, coupled to the second delay unit and the first multiplier, for outputting the digital real cross-talk compensated signal component.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
